

Sapivents project code styleguide

[General guidelines](#)

Additional notes:

- Tabs for indentation
- Use spaces when initializing variables e.g. `int x = 1;`
- Use [butterknife](#) for onclick, ontouch etc. methods and for view binding
- JavaDoc for almost every method (exceptions include activity callbacks, etc.)
- For string literals, use values/strings.xml
- Long, specific names are encouraged
- Separate unrelated code segments with two enters. Example:

```
@Override
protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_main);

    ButterKnife.bind(target: this);
}
```
